

GB HabiStat Bearded Dragon Accessory Kit – Detailed Setup Instructions

Caution: Do not connect any electrical equipment to the main until the set up has been completed

Enclosure Placement: Keeping the enclosure away from any heat source and windows within the home is strongly recommended. Incorrect placement can cause temperature fluctuations. Refer to instructions enclosed in the tank how to build.

HabiStat Dimming Thermostat (High Range): Place the Thermostat probe in the basking area, either on the floor surface or a side wall. Set the temperature to 38°C (100°F) by turning the dial on the Thermostat unit. Refer to individual instructions for installation advice.

Arcadia Ceramic Lamp Holder & Bracket and HabiStat Bulb: Install bulb into Ceramic Lamp Holder. Secure the Ceramic Lamp Holder to the inside-roof of the vivarium on the left-hand side, approximately 7-10" from the side wall. Refer to individual instructions for installation advice.

Heater Guard: This should be installed over the Ceramic Lamp Holder and Bulb to protect the animal from potential contact.

Arcadia Pro T5 UVB Kit: Insert the 12% bulb into the ProT5 unit and secure to the inside-roof of the enclosure, ensuring the unit starts 3 or 4 inches from the left-hand sidewall (this will leave ample room to plug in the power or link cable) Refer to individual instructions for installation advice

Digital Compact Thermometer x2: Place one Thermometer probe within the basking area of the enclosure alongside the Thermostat probe – and the other in the opposite cool-end of the enclosure. This will give you accurate readings in the required areas.

HabiStat Sandstone Feeding and Water Dish: The feeding dish is best placed centrally, or in the cool end of the enclosure. The Water dish is best placed in the cool end. Make sure the enclosure doors are closed for this next step.

Temperature Check: Ensure all doors are closed for a minimum of 30 minutes for the enclosure to heat up before monitoring. The basking area should be between 38°C (100°F). Adjust the dial on the Thermostat accordingly if these parameters are not being achieved. Continue to monitor over the next few hours. Please note opening the doors will affect the temperature but will stabilise when complete.

Arcadia Earth Pro Ca & Pro-A: Use the supplements when dusting insects for consumption. Refer to instructions on packaging.

Arcadia Earth Pro Dragon Fuel: Use this dietary supplement by sprinkling on provided greens / vegetation. Refer to instructions on packaging.

HabiStat Insecta Snack: Use as a livefood supplement to add nutritional value. Refer to instructions on packaging.
