

GB HabiStat Snake Accessory Kit – Setup Instructions

Before setting up the Kit, you will need to build your vivarium (in accordance with the instructions) but please refrain from fixing the top as this will make the Snake Accessory Kit Installation easier.

Caution: Do not connect any electrical equipment to the mains until the set up has been completed

Vivarium Placement: Ensure the vivarium is kept away from any heat source or windows within the home as incorrect placement can cause temperature fluctuations.

HabiStat Dimming Thermostat: To provide accurate readings, place the thermostat probe on the base of the enclosure directly underneath the heat source ensuring there are no obstructions. Set the required basking temperature for your chosen species of Snake by turning the dial on the Thermostat unit. Refer to thermostat instructions for installation advice.

Arcadia Ceramic Lamp Holder and Arcadia Pro T5 UVB Kit: Install the UVB Kit and Ceramic Lamp Holder to the inside of the enclosure roof using the screws provided. Once installed insert the 6% bulb into the UVB Kit. Refer to product instructions for installation advice.

Arcadia Lamp Guard Pro: Attach the Lamp Guard Pro around the ProT5 kit using the screws provided.

HabiStat Heat Guard and HabiStat Bulb: Attach the Heater Guard around the Ceramic Lamp Holder using the screws provided. Once installed open the hinged bottom and insert the bulb. Refer to product instructions for installation advice.

Digital Compact Thermometer: Place the Thermometer probe within the basking area of the enclosure alongside the Thermostat probe. This will give you an accurate reading in the required area. You are now ready to connect the electrical equipment.

Substrate: Place your chosen substrate into the base of the enclosure ensuring the thermostat probe remains on the surface.

Attach the top of the vivarium. Make sure the enclosure doors are closed for the next step.

Temperature Check: Ensure all doors are closed for a minimum of 30 minutes for the enclosure to heat up before monitoring. The basking area should be within the temperature range of your Snake species requirements. Adjust the dial on the Thermostat accordingly if these parameters are not being achieved. Continue to monitor over the next few hours. Please note opening the doors will affect the temperature.

HabiStat Plastic Hide and Moss: Place the Plastic Hide into the middle, towards the rear of the enclosure. Add Moss inside the hide to create a moist hide. Keep the Moss damp by spraying with fresh water daily.

HabiStat Round Water Bowl: Place in the cool end of the enclosure and replace with fresh water daily.

HabiStat Bactericidal Cleaner: Use to disinfect décor along with maintenance of the enclosure.

HabiStat Viv Lock: Fix the ratchet arm to the inside door. The lock body slides along the arm, keeping the glass doors from opening. Unlock using the key included.

Enclosed product may differ due to availability.
